

Sanket joined Gitanjali School in 1999. Our school is affiliated to the ISC board and has been consistently rated as being among the top ten schools in India.

Sanket displayed his potential at a very young age. His all round performance led to his being awarded the 'Best All Round Student of the Year' prize twice, once in 2003-2004 and again in 2011-2012.

He has a natural affinity for Mathematics, Physics and Computers. His instinctive grasp of these subjects enabled him to pick up several awards in the National Science Olympiads and the International Olympiad of Mathematics. His command over these subjects is combined with a flair for innovation. His Science project on 'Data transmission through Lasers' was much appreciated as was effort in designing a 'Light Following Robot' for our recently held Science Exhibition.

He has excellent communications skills and enjoys debating. He has, on several occasions, represented the school very creditably at various debates and other Literary Arts events.

His ability to get on well with others and carry them along made him a natural choice for the post of 'Head Boy' of the Junior School and then again, the 'Senior Coral House Captain' in the Senior School. In both positions, he discharged his duties conscientiously and with impeccable integrity, setting an excellent example for his fellow students.

Apart from his studies, he is also interested in conservation issues as a member of our Nature Club, he joined the 'Sanctuary Asia-Kids For Tigers' programme and was selected as 'Tiger Ambassador'. Along with seven other such students, he participated in several skits and plays to drive home the message of conservation. He was also part of the National Tiger Census at Kawal and Eturunagaram-two tiger reserves in Andhra Pradesh. As a life member of two NGOs-The Bird Watchers Society of Andhra Pradesh and The Society to Save Rocks, he has been actively involved in their efforts to conserve the unique rock formations around Hyderabad as also in documenting the changes in bird populations in and around the city.

Three weeks spent in Hasselt, Belgium, as part of a student exchange programme organised by Perspectief VZW, have added to his confidence and poise.

I strongly believe that a boy of his natural abilities, inquiring mind and a creative bent will receive just the right kind of stimulus and nurture at pioneering institute like Cambridge University. I wish him the very best in his endeavour.
