

The absolute certain way to choose subjects that match the student's strengths and career dreams.

Subjects chosen by a student for Class 11 determine the final grades in Class 12 and admission to colleges.

Powered By

Common Scenarios Faced By Students in Class 11 & 12

What This Means for the Student

Not getting good marks in the chosen subjects

Lower grades and lesser chances of college admission

Not enjoying the subjects chosen

Unhappiness and loss of focus on studies

Not allowed to apply for specific courses/colleges with existing subjects

Not getting into preferred college/course

The Traditional Way of Subject Selection

Take inputs from friends and family

Deciding on the basis of someone else's journey, which may have nothing in common with your child's

Choose from among the limited subjects offered by the School

Schools have constraints - limited seats per subject, limited staff.

Go for subjects that seem easy

But this could affect eligibility and admission chances into a dream course/college

IMPLICATIONS

The student's career dreams are not counted

Individual aptitude and interests get overlooked

The subject choice prevents admission to certain courses, colleges and countries

Meet Ronak

- Scored 91% in Class 10 (CBSE)
- Wanted to study Business Management abroad
- Selected Commerce subjects but ignored Mathematics

Didn't know that without Mathematics, he can't apply to good colleges abroad for Business courses

Result
Unable to get his desired college courses, had to settle for a second option

Meet Mihira

- Studied in an IB Curriculum school
- Wanted to study Law in UK later

Selected the requisite Class 11 subjects from the necessary Groups, but didn't realise that she could improve her admission chances by adding Economics/Psychology

Result
Did not get into her most preferred colleges due to fierce competition with students who had studied Economics or Psychology

Meet Rekha

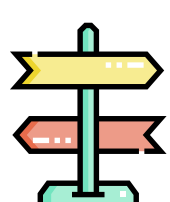

Good student, planned to study Engineering and also thought of Liberal Arts as a backup. Apart from Maths, chose Economics as a core subject

Result
Didn't get through top engineering colleges but due to her smart subject selection, got into Ashoka University, a top Liberal Arts college with multiple future career options

Choosing The Right Subjects Helps A Student

**Score well in
core subjects**

**Make wise
career decisions**

**Improve chances
of admission**

Subjects should match the student's personality, strengths and future dreams. Each child is unique; is a one-size-fits-all approach really the best option for your child?

Introducing the [Subject Selector](#), an Expert Roadmap to the Right Subject Selection

A scientific way for your child to choose the best subject combination after Class 10

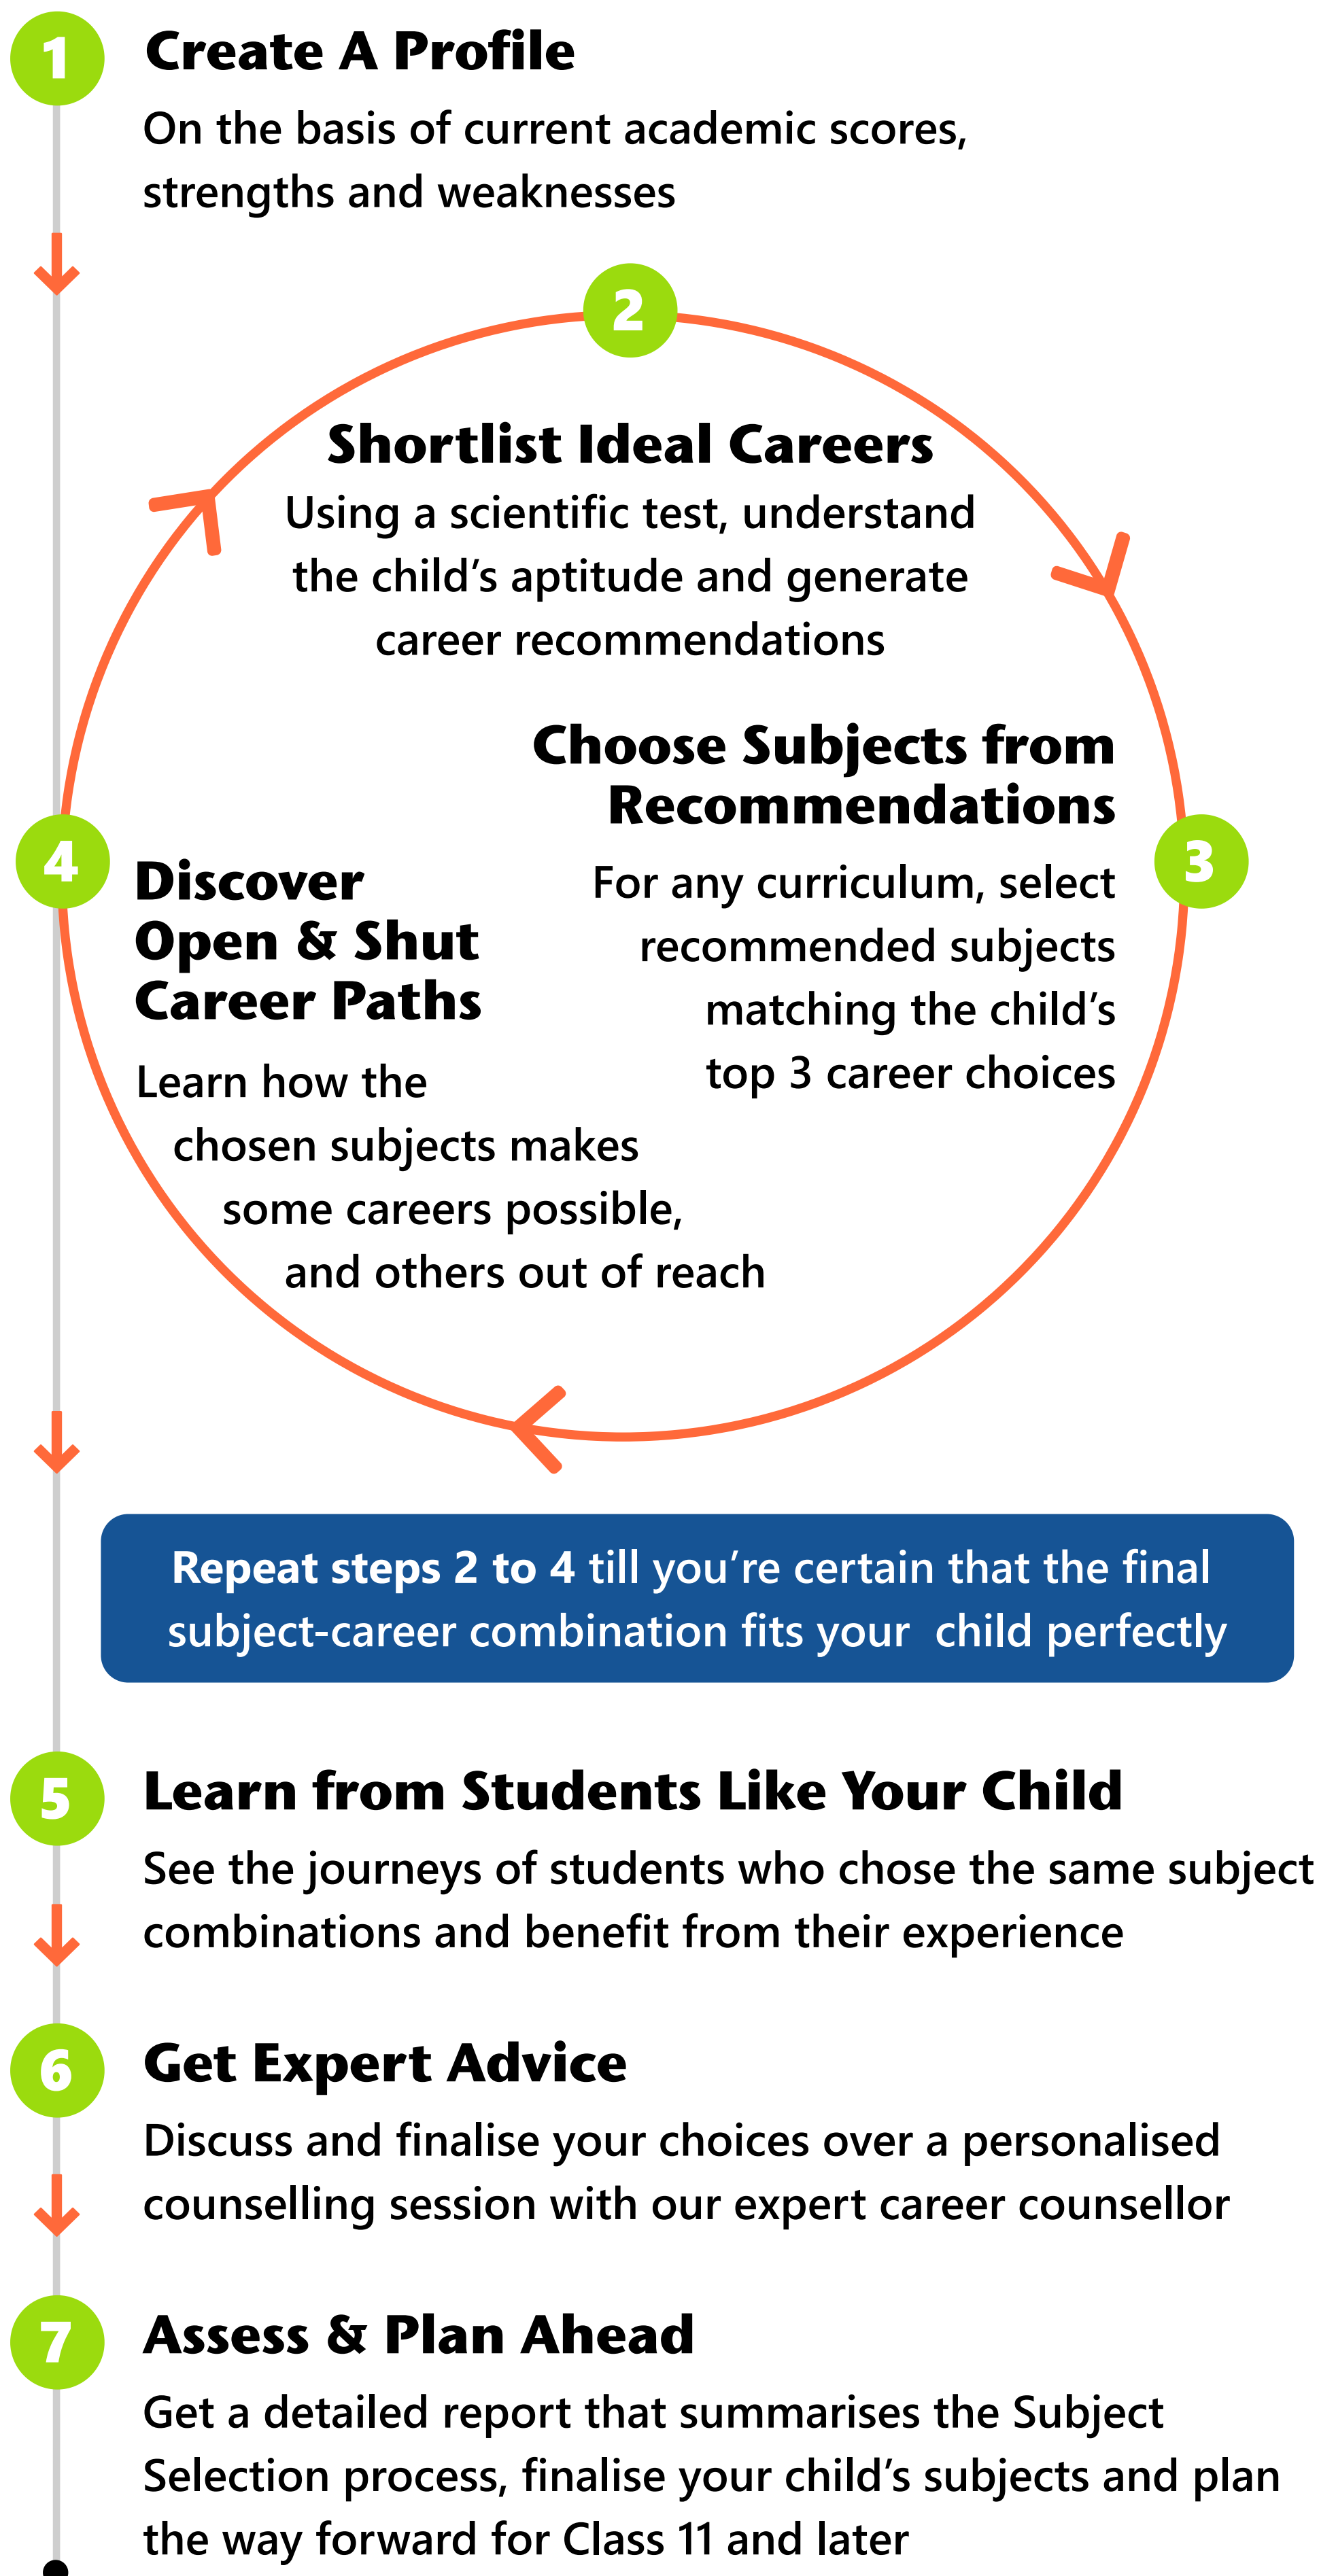

Personalised according to their individual qualities and desires

Considers academic performance along with individual strengths, interests and dream careers

Provides insights into success stories of other students with similar subject choices

Takes you and your child from confusion to clarity with certainty

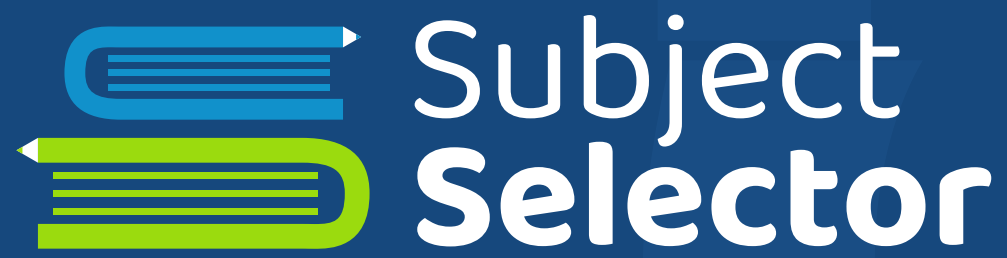

The **7 Step Roadmap** for Your Child

The Subject Selector Vs Traditional Approaches for Subject Selection

Parameters	Subject Selector	Psychometric Assessments	Career Counsellors
Understanding of academic background	✓	✗	✓
