A SLABS student has the option to take up departmental or general electives and carve a unique learning experience suitable to his/her interests under the Inter-Disciplinary Experiential Active Learning (IDEAL) model. They also have the choice of opting for Minors during the 3-year course duration to establish expertise in 2 different fields. These fields can be completely unrelated, which simultaneously helps students to indulge in different interests, helps to build diverse perspectives, and is something that most universities are unable to offer. For example, a student of Computer Science can go for a specialization in a topical field such as Artificial Intelligence while doing a minor in History.
